## PROFESSIONAL SUMMARY

Early-career product manager with a CS and AI/robotics engineering background who builds with AI tools, not just specs for them. Vibe-coded a full startup application on Base44 and designed a multi-agent pipeline on Claude, shipping prototypes through 8+ iterations to validate direction before committing to a build. Comfortable with ambiguity, curious by default, and fluent translating between engineers and non-technical stakeholders across a startup, an enterprise SaaS product, and a 12,000+ user program.

## EDUCATION

**Master's in Management of Technology, New York University** May 2026  
Relevant coursework: Technology Strategy, Design Strategies, Project Management  
**Bachelors in Computer Science Engineering with AI & Robotics, Vellore Institute of Technology** Jul 2024  
Relevant coursework: Database Management Systems, Machine Learning and Its Applications, Statistics for Engineers

## CERTIFICATIONS

**Databricks Certified Data Engineer Associate** June 2026

## WORK EXPERIENCE

**Program Operations Coordinator | New York University** Jan 2025 – May 2026

- Cut 10+ hours/week of manual reporting for a 12,000+ user program by building automated Tableau and Excel dashboards across 25 KPIs, giving stakeholders the data to prioritize fixes.
- Resolved 40+ operational issues end to end by diagnosing root cause, then partnering with engineering to prioritize and ship fixes across 5 concurrent program cycles.
- Kept engineering and non-technical partners aligned on priorities for 12,000+ users in an Agile environment, holding timelines and dependencies through each cycle.

**Product Manager (Startup) | Voushify** Aug 2025 – Dec 2025

- Built the entire Voushify application by vibe coding on Base44, selected after evaluating the AI app-builder market on build speed and iteration cost, shipping 3 core workflows through 8+ prototype iterations and 15+ stakeholder demos before committing to each build.
- Validated product direction before the team committed to it, testing 3 personas and 40+ requirements against 12+ discovery interviews and 200+ survey responses.
- Won Founder-CEO approval on a single go-to-market direction by developing and pitching 5 data-backed plans.

**Product Strategy & Operations Intern | Denave** Jan 2024 – Jul 2024

- Acted as the technical bridge for 20+ enterprise accounts on iSFA, translating customer requirements into delivery specs and explaining technical tradeoffs back in plain terms.
- Converted 120+ customer inputs into 60+ tracked user stories by running 30+ workshops with clients and technical delivery teams.
- Queried client feedback and usage data in SQL to surface where the product was failing at scale, then built Tableau analyses that made the findings clear to non-technical stakeholders.

**Program Coordinator, AI & Robotics | Vellore Institute of Technology** Sept 2021 – Apr 2024

- Drove a 45% increase in platform adoption across 700+ users by acting as the bridge between AI startups and the university, converting interest into sustained usage.
- Validated 15+ technology pilot deployments before campus-wide rollout by coordinating readiness testing with engineering teams, faculty, and external partners.

## SKILLS

**Product & Technical:** Vibe Coding & AI-Assisted Development (Base44), AI Agent & API Workflows (Claude, Apify, Apollo), Rapid Prototyping & Iteration, Product Requirements & User Stories, Technical Tradeoff Communication, Roadmap Planning

**Data & Tools:** Python, SQL, TensorFlow, Advanced Excel, Tableau, Jira, Databricks (Certified Data Engineer Associate), KPI Monitoring, Root-Cause Analysis, Agile & Scrum

## PROJECTS

**AI Agent Automation — Multi-Connector Sourcing, Scoring & Outreach Pipeline**

- Designed and run a multi-stage agent pipeline on Claude orchestrating Apify, Apollo and Gmail connectors: scrapes 8+ platforms, scores each result against a rule-based rubric onto a live board, then enriches targets and generates templated outreach as reviewed drafts. 60+ items processed to date.

**VisioHealth — ML Disease Prediction & Self-Service Patient Dashboard**

- Built an ML system using MTCNN/FaceNet for facial-recognition record retrieval (81%) and Random Forest for risk prediction (84% diabetes, 88% heart disease) in Python and TensorFlow, then shipped a self-service Tableau dashboard for end users.

**Process Automation — Electronics Rental Portal Billing Pipeline**

- Built a three-stage RPA pipeline in UiPath that extracts customer records from a MySQL database, filters unpaid accounts, and auto-dispatches itemized invoices by email, removing manual billing end to end; also built the underlying rental portal.
